

PACIO-eLTSS Use Case

Scene 1 HOME

Patient receives HCBS services at home

SW assesses and documents eLTSS data in the case management system

eLTSS data is pushed to the Data Hub

Scene 2 HOSPITAL

Patient experiences a fall at home and is admitted to the hospital for surgery.

After the surgical intervention, patient is assessed by the nurse, PT/OT/SLP and recommended to continue PT/OT therapy in a SNF.

Cognitive and functional assessments completed and documented in the hospital EHR are pushed to the Data Hub

Scene 3 SNF

The patient is admitted to the SNF to continue PT/OT/SLP rehabilitation after surgery, for 14 days

Functional and Cognitive status is assessed on admission and discharge and pushed to the data manager

The SNF retrieves and reviews the PACIO-eLTSS data and assessment data from the Data Hub to inform her care.

Scene 4 PSEUDO DEL

The assessment application pulls the standardized assessment data from the CMS DEL to present forms to the clinician performing the assessments

The assessment application stores the functional and cognitive assessment answers into the Data Hub

Scene 5 HOME

Patient is discharged home to continue receiving HCBS and Home Health services (PT/OT/SN)

The HHA agency coordinator reviews the patients PACIO-eLTSS data as part of the triage process. Data set can be pulled from the Data Manager of the Patient Web Client

Functional and Cognitive status and is assessed on admission and discharge and pushed to the data manager.

Scene 6 PATIENT/FAMILY ACCESS

Patient shares her medical record with her adult son and daughter.

The patient can refer to her care plan to inform her daily activities
