CDA IG Proposal

(Instructions for FHIR IG proposal
https://confluence.hl7.org/pages/resumedraft.action?draftId=81024620&draftShareId=b552a636-ed6e-4961-b7d9-12f8b4d42bb1&)

Purpose:
When do complete: before NIB

Title Page:
1. Make the title of this page the name of your IG Proposal (the appropriate label is already attached to the page).
2. Fill out fields below
3. Publish page at bottom right
4. Get the IG sponsor work group to approve the content and update the Committee Approval Date
5. Send an email to fmgcontact@hl7.org to trigger a review of the content on one of the FHIR Management Group's regular calls.

Primary Sponsor:

Committee Approval Date:
This is the date the sponsor for the IG approved the text of this IG proposal (objective is to ensure they agree with the realm, code descriptions, etc).

Contributing or Reviewing Work Groups
Who needs to review the IG prior to ballot or final publication

Project Insight ID
'Pending' is ok, so long as the PSS has been submitted to HQ

Scope of IG
What are the scope boundaries of this resources? Specifically, how is it distinct from other IGs in the core space? Who is it targeted at? Note that what we want is the overall scope of what it will eventually be, not necessarily what's covered by the current project. The objective is to ensure that we "right-size" IG scopes so that the publications we have 5+ years from now will have clear boundaries and will fit well together. (Please don't just copy the scope section from your PSS.)
Purpose of IG

Content location
GitHub repository
What is the URL for the Github repository where the IG source is maintained? Note that this must generally be under https://github.com/HL7/

Proposed IG Title
Title needs to be clear, short-ish, U.S. English, meaningful to non-domain experts (expand non-common acronyms) and clearly distinct from the name of other IGs. The name here should also appear in the 'title' of this Confluence page.

Proposed IG realm and code
Realm should generally be 'us' or 'uv'. The 'code' is what will appear as the URL of the IG. It needs to be relatively short, unique within the HL7 space and as intuitive as possible for implementers looking at it. It must also be all lower-case.

CDA IG Version(s)
What version(s) of CDA will the IG be associated with in its initial release?

Maintenance Plan
Who will be maintaining this content in the long term (5-10 years down the road - after the initial development project is finished).

Short Description
DO NOT COPY FROM PSS. This is a short (2-3 sentence) description of the IG content expressed in present tense that describes what the IG does and who it's for. It will be displayed in the initial search results for the IG and will allow future implementers to evaluate whether the implementation guide has potential relevance when scanning through a list of possible IGs that met their search criteria. This should not talk about the project or work group at all.

Long Description
DO NOT COPY FROM PSS. This is a longer (2-3 paragraph) description of the IG content expressed in present tense that describes what the IG does and who it’s for. It will be displayed as the detailed registry entry for a given implementation guide in the IG registry. It should provide information about the scope of the IG, what systems it covers and what type of interoperability it enables. This should also not talk about the project or work group. It should be written from the perspective of the project being long complete and someone is just evaluating the artifacts.
Involved parties
What external agencies (if any) are involved in the creation of the IG?

Expected implementations
What implementers have already committed to the IG or are otherwise expected. The focus of HL7 is getting widespread implementation of specifications, not just balloting them, so the FMG wants to know what implementer reach-out has occurred and what degree of implementer commitment exists. Also, specifications must generally meet FMM 2 maturity criteria (at least 3 independent test implementations successfully demonstrating interoperability across most of the IG scope) prior to going to ballot.

Content sources
Where are/will the requirements for the IG being taken from? What external specifications are being consulted?

Example Scenarios
Provide a short description of 2-3 interoperability exchanges that will be enabled by this IG.

IG Relationships
Does your IG depend on any other IGs? If so which ones? Are you expecting other IGs to depend on your IG? If so, which ones?

Timelines
When do you expect to bring the proposed IG to ballot for the first time?

When IG Proposal Is Complete

When you have completed your proposal, please send an email to <CMG contact>

CMG Notes
Leave this area blank. The FMG will fill in any changes they would like to see or questions they have during their review here.
