3) Walk on topics and questions

- PACIO leadership answered a question about the methodology for Functional Summary Score. The STU-1 version of the IGs, have a functional status and cognitive status collection which groups observations. For an assessment with a summary, we put the summary score in the collection. Based on feedback from HL7’s Patient Care and Orders and Observation workgroups, we’d like to have a top-level collection for the assessment, a lower collection for the summary score, and individual items below that with their own scores. The exception would be proprietary assessments, which would only contain the top-level scores and not the individual items.
