Atlassian and Salesforce SSO Announcement

New account requests: HL7.org - Jira - Confluence - Account Request

Linking your accounts: Link your Atlassian and HL7.org Accounts

Announcing Single Sign-On for Confluence and Jira.

We are excited to announce that single sign-on (SSO) functionality is here! This means that you will be able to use a single set of credentials to access Confluence, Jira, and HL7.org, making it easier to use our products and get your work done.

With SSO, you will no longer have to remember separate usernames and passwords for Confluence/Jira and HL7.org. You will also be able to sign in more quickly and easily, which can save you time and frustration. If you have forgotten your password, you will be able to reset your password easily without contacting HL7 administrators.

Single sign-on is a method of authentication that allows users to securely log into multiple applications and websites with a single set of credentials. SSO requires defining a trust relationship between applications using an identity provider. HL7 will be using our HL7.org application as our identity provider.

Benefits of Single Sign-On

- Improved security: SSO can help to improve the security of your Confluence and Jira accounts by reducing the risk of your accounts being compromised.
- Increased convenience: With SSO, you will no longer have to remember separate usernames and passwords for Confluence/Jira and HL7.org.
- Improved user experience: SSO can provide a more seamless user experience by allowing you to use a single set of credentials to access multiple applications.

What do you need to do? Please ensure you have done these 2 steps.

Step 1: You must have a HL7.org account.

You may have created one already to log in to HL7.org. HL7.org login mechanism has been live on HL7.org since November of 2022.

If you don't already have a HL7.org account (HL7.org), you will need to go to: https://hl7.my.site.com/LightningMemberPortal/s/login/SelfRegister and create an account.

If you already have a HL7.org account move to Step 2.

Step 2: Your Atlassian Username must be registered.

What do you need to do?

It is critical that you verify your Atlassian (Confluence/Jira) username was properly imported into HL7.org. Please log in to the My Info page on HL7.org (https://hl7.my.site.com/LightningMemberPortal/s/#/profile/my_info) and look under the “Communication Information” area. Your Atlassian username will be listed there.
Note: You may have to enter your HL7.org Username/Password before being able to be passed to the My Info page.

If the Atlassian username listed in the HL7.org My Info page matches your Atlassian (Confluence/Jira) username, you do not need to do anything else to begin using your HL7.org (HL7.org) Username/Password to log onto HL7.org, Confluence, or Jira.

If the Atlassian username listed is incorrect, please submit your update here: Atlassian Username Fix

Once your Atlassian username is corrected on the My Info page in HL7.org by the HL7 Tech Team, you may log in via SSO on the Atlassian applications using your HL7.org account.

Forgot username in Atlassian? Request it here: https://jira.hl7.org/secure/ForgotLoginDetails.jspa

Please reach out to webmaster@hl7.org with any questions regarding the above process.

FAQ

Will my Atlassian account be moved or changed due to SSO being implemented? No, there will be no changes to any existing Atlassian accounts that you may have.

If I am connecting to Confluence or Jira via REST, do I need to use my old Atlassian account credentials under basic auth? You can, but don’t have to. You can use the token granted by a successful login to hl7.org.

If I have multiple accounts on both platforms, how do I know which account is linked and how do I change? Reference step 2 above by verifying your My Info entry for “Atlassian Username”. If it is empty, Atlassian will look for your email address to match accounts. If you have no parity between information on either system, please reach out to webmaster@hl7.org to update your accounts.
