**Chargeltem**

**Owning committee name**
Patient Administration

**Committee Approval Date:**
24 Jan 2017

**Contributing or Reviewing Work Groups**
Financial Management

**FHIR Resource Development Project Insight ID**
pending

**Scope of coverage**
Chargeltem is used to communicate statistical or billing relevant information associated with services (planned or actual). Chargeltems are placed into Patient Account resources. Tracking Financial information is vital in Patient Administration and Finance systems in most Healthcare Organizations. This resource provides the individual items to track.

This resource is not an actual financial transaction (such as an item on an invoice), but is the base administrative data that may be used by a billing engine to create the financial transactions (which may be done outside FHIR).

The FHIR Claim resource does contain line items, and this Chargeltem resource provides the source material for the billing engine to create the items on the claim (which may be different due to business rules).

**RIM scope**
Financial Transaction

**Resource appropriateness**
Tracking Financial information is vital in Patient Administration and Finance systems in most Healthcare Organizations. This resource provides the individual items to track.

**Expected implementations**
- Any solution that requires tracking billing information

**Content sources**
Existing normative V3 and V2 specifications

**Example Scenarios**
- Identify Encounters that may be billed for time spent in a facility
- Lab system sends Chargeltems containing billing codes for administered services to the patient's account
- Billing System queries patient account for all billable Chargeltems to create an Invoice/Claim
- Hospital maintains internal catalogue of statistically relevant services. All systems providing these services post Chargeltems into the Accounts of the Patients for whom these services have been provided. Customized queries can be used to analyze distribution of services among patient cohorts or developement of services provisions over time

**Resource Relationships**
- Reference to Account (account)
- Reference to Encounter/EpisodeOfCare (context)
- Reference to Patient/Group (subject)
- Reference to any type of Request (basedOn)
• Reference to any type of Event (service)
• Self reference to permit grouping of charges
• (May also need a reference from the Claim back to these Items)

Timelines

We have built a draft placeholder for this resource, and working with the Finance WG to refine it during the 3.0/4.0 timeline.
