Feedback from FM WG re: PDex IG	<p>Presented PDex IG on Wednesday May 22nd.</p> <ul style="list-style-type: none"> • Generally a positive review session • Reuquest to update and expand on overview to further explain what we're trying to accomplish and orient readers <p>Additional work on IG</p> <ul style="list-style-type: none"> • Build Provenance section out further to give provider enough information to determine if they want to write data to their EHR • Added some mappings from CARIN Alliance work and CMS Blue Button 2.0 implementation • Added table to identify the minimum fields that should be provided in order to create a valid US Core Resource <p>FHIR Patient-everything operation</p> <ul style="list-style-type: none"> • Query Patient resource, and get everything about a patient such as Encounters, Procedures, etc. • Can receive a paged bundle, or • Didn't specify transport method • Did define the payload - an unpagged bundle (everything in one bundle) • If payers can communicate securely to another payer, and member requested data to be sent to the payer, then payer could use this operation to bundle everything and send • Added clarification to IG that if, for example, the payer has attribution for 1,000 patients - they would not be able to make a call using one member's access token and get data for all patients - the authorization only extends to that one member <ul style="list-style-type: none"> • If we're only going to use this to find one patient's data, why are we offering the other option for all patients? • Mark Scrimshire will simplify by removing patient/\$everything 	
PDex Network Directory IG Status	<ul style="list-style-type: none"> • Robert Dieterle creating mapping to reduce the Validated Healthcare Directory down to what we need, and taking first stab at modifying the text that describes the environment we're making this work in • Daniel Chaput / Alex Kontur will take that and remove items that aren't relevant to what we're doing • Going through underlying mechanics of tooling for IG editing <ul style="list-style-type: none"> • May use Lantana's Trifolia tool - Mark Scrimshire will connect Daniel Chaput with Sean McIlvenna and Rick Geimer • Text part is easy, even with XML hand-tooling • If deleting a reference from multiple places, more complex 	
PDex Formulary IG status (David Hill)	<ul style="list-style-type: none"> • David Hill needs commit access to GitHub repository - requested access from Rick Geimer and Grahame Grieve <ul style="list-style-type: none"> • Each user needs to agree to HL7 operations manual and agree to actively manage Zulip stream • Send info to Lloyd McKenzie and he can address this afternoon • Loaded drug data from CareFirst BCBS; able to pull that information and display it • Medication Knowledge resource limitations and out of box HAPI search interface limitations - proposed a minor change to IG <ul style="list-style-type: none"> • Searching by RX Norm code and Drug Tier • 2 servers set up - one based off of 5/19 IG and one based off of change proposals • Working on a second client to query the second server to do more advanced search • Right now based off of QHP model for Connectathon • Targeting to get other features in by June 6 • Putting together some talking points/proposals to address the limitations mentioned above 	
Da Vinci Connectathon May 29-30 (Jacksonville, FL)	<ul style="list-style-type: none"> • Issue re: one user being valid across any instances in the HSPC Sandbox <ul style="list-style-type: none"> • When you create a sandbox, using same base set of synthetic set of resources - so patients match across sandboxes • If you authenticate in one sandbox, the cookie used is valid to connect to the other sandbox - so you can't recreate coming from one sandbox to the other and going through authorization process again • AEGIS - scenario test cases are in Touchstone <ul style="list-style-type: none"> • Register prior
