

# Approve removal of ARV from Batch structure

Status	NOT STARTED
Stakeholders(mover/Second)	<a href="#">Ulrike Merrick</a> / <a href="#">Craig Newman</a>
Outcome(Affirm-negative-abstain)	3-0-0
Due date	24 Oct 2019
Owner	<a href="#">Anthony Julian</a>

## Background

Approve removing the ARV segments from the batch structure in 2.10.3 since they are redundant. The content of the MSH, BHS and FHS segments contains the info that would be in the ARV.

Also change FSH to FHS in 2.14.15, 16, 17 - and throughout chapter. There are also instances of BSH.

Kathleen to validate the text in to validate that ARV is a concept in this rather than the actual segments.

### 2.1.1.0 BHS-17 Special Access Restriction Instructions (ST) 02431

"

Definition: Used to convey specific instructions about the protection of the patient's data , which must be rendered to end users in accordance with patient consent directive, organizational policy, or jurisdictional law. For example, in US law 42 CFR Part 2, disclosed information made with patient consent must include a renderable "Prohibition on re-disclosure" warning (§ 2.32[1]) In addition, organizational policy MAY require that some or all of the ARV field privacy tag values be rendered to end users, e.g., marking a consult note with "Restricted Confidentiality" or with sensitivity tags such as "VIP" or "EMP" for employee of the organization.
