

Argonaut Project Home

Welcome to the Argonaut Project

About the Argonaut Project

The Argonaut Project is a private sector initiative to advance industry adoption of modern, open interoperability standards. The purpose of the Argonaut Project is to rapidly develop a first-generation FHIR-based API and Core Data Services specification to enable expanded information sharing for electronic health records and other health information technology based on Internet standards and architectural patterns and styles. This effort follows on recommendations from the Joint HIT Standards and Policy Committee's [JASON Task Force Report](#), the HIT Standards Committee's NwHIN Power Team, the MITRE JASON Reports of [2013](#) and [2014](#), and the [2010 PCAST Report](#).
