- Reviewed the [MCC eCare Plan use cases/patient story](#) for nutrition implications
 - patient has CKD, Type 2 diabetes, congestive heart failure
 - patient "Struggles to **manage her diet** and find affordable healthy food choices under her financial strain." (noted this has a tie in to the work on the Gravity Project related to food insecurity)
 - goals: "Lower high BMI..." and "Improve access to affordable food"
 - Interventions: "Referral to registered dietitian for medical nutrition therapy"
- Noted that MCCeCare Plan is US realm, however the updated Nutrition DAM will be universal
- The current [Nutrition DAM](#) is specific to Diet Orders
 - The focus is on ordering an oral diet, nutritional supplement, and/or enteral feeding in an inpatient setting
 - We plan to expand to include "nutrition prescription" to cover the outpatient setting
- Work had been previously started to update the DAM, which include creating use cases for dietitian consultations and follow-ups in both inpatient and outpatient settings
- Started reviewing/updating the previously created use case for an outpatient initial consultation to change the patient story and details to match those of the MCC eCare Plan persona.

-
