IG Templates

FHIR IG templates are used by the IG Publisher Tool when publishing FHIR Implementation Guides. The templates control:

- the look and feel of the published IG
- the way the resources are expressed as pages
- how users navigate around the pages

From the point of view of an IG Author, the IG template consists of a package they reference, and documentation that describes how the author writes their own narrative and fits that into the pages described by the template.

Full guidance on the use of the templates - as well as what templates are available for use can be found here
