

GForge Retirement

As part of HL7's transition to the Atlassian Product Suite and Github, HL7's GForge is being retired. We began the replacement of GForge Trackers with [Jira Specification Feedback](#) in 2020, and we're now ready to complete the transition to Github for source code and to Confluence for document storage. As of **November 8, 2021**, GForge will no longer be available for storing new content. Content that remains on GForge as of this date will be archived and continue to be available for read access only by submitting a request to the HL7 WebMaster (webmaster@hl7.org).

Where do I look?

CONTENT	MATERIAL LOCATION:
Documents such as minutes, Decision Making Practices, Mission and Charters on GForge created or modified prior to May 1, 2016 , is no longer needed to support ANSI requirements	Material is archived. If needed later, it will be available by contacting HL7 Webmaster.
Content that has been approved and added to your Confluence page or to your page on hl7.org - for example, draft Mission and Charters, Decision Making Practices, SWOT analyses, etc.	Material is archived. If needed later, it will be available by contacting HL7 Webmaster.
Ballot reconciliation spreadsheets from previous ballots that are completed and have been uploaded to the Ballot Desktop	The source of truth for these is the Ballot Desktop. If needed later, retrieve via the Ballot Desktop.
Preview ballot content for specifications that have previously been balloted,	Material is archived. If needed later, it will be available by contacting HL7 Webmaster.
Presentation material	Material relevant to an active project should be on Confluence. If needed later, it will be available by contacting HL7 Webmaster.
Enterprise Architect models	Models being actively worked on should have been moved to EA Cloud. If needed later, it will be available by contacting HL7 Webmaster.
Specifications, including Version 3 Material	Specifications actively being worked on where source control is needed should have been moved to Github. Specifications not being actively worked on are archived and will be available by contacting the HL7 Webmaster if needed in the future. Request a Github Repository via Github Repo Request Jira Project .
