Minutes

1. The WG finalized the agenda for its meeting on Monday, 2022-05-09 during the WGM next week, which will be operated in the EDT zone. While all four quarters have been reserved, the WG meeting will start in Q2 at 1100 EDT (1500 UTC) in order to enable participation from the West Coast of North America (PDT time zone).

2. The agenda will include:
   b. Review group health (currently fully healthy)
   c. Go over examples for Arden 3.0 to discuss new syntax. The goal is to identify commonalities in the Arden and FHIR syntaxes and identify an appropriate way to map the two in the Data Slot. While FHIR is largely unreadable by clinicians, Arden is intended to be understandable to the extent that the clinician can validate the logic in the Logic and Evoke Slots. We intend to extend the Arden Syntax to allow mappings to occur such that an MLM will be able to reference individual profiles from a library of profiles and re-label the data elements to make them readable.
   d. Review Arden Syntax document. We will identify locations where the syntax needs to change to facilitate this goal.
