Minutes

1. **CDS Hooks**: Isaac Vetter provided an update on work involving this standard.
   a. Basic functionality supported by the standard was reviewed.
   b. New/improved features in v2.0: Inclusion of override reasons; support for a feedback service (e.g., feedback from the user's system to the CDS server); and refinements to CDS Hooks response.
   c. Hook Definition Project: The hook maturity model (documented ? mature ? normative) was reviewed as it related to the balloting of individual hooks.
   e. Related FHIR issues were discussed.
      i. FHIR-37501: Recommendation to facilitate via the Clinical Reasoning Module the launching of a smart app using a task.

2. **FHIRcast Project**: Isaac Vetter provided an update on this project.
   a. Application context synchronization standard that effectively is a replacement for CCOW.
   b. Currently in the process of doing resolution on the STU3 ballot from May, 2022.
   c. Future plans: Content exchange; coordination with IHE (avoiding duplicative content); interaction between Imaging Infrastructure WG’s ImagingSelection and FHIRcast.
   d. Connectathon report:

3. **International Patient Access (IPA)**: Isaac Vetter provided an update on this project.
   a. IPA == RESTful APIs to facilitate querying of data about a patient from EHR systems, particularly in patient-facing applications and particularly to facilitate international applications.
