Where did my page go and how do I move it to where I want it?

I created a new page, now I can not find it.

Step-by-step guide

There are two ways to create a page:

1. Press the Create button at the top of the page.
   a. This will created the page as a child of the page you
      are viewing.
2. Press the ellipsis next to the Create button.
   a. The Dialog to the right will be launched.
   b. Note - the current space is displayed in the space
      selection pulldown (circled in orange).
   c. The Parent is displayed on the right side of the dialog
      (circled in blue).

To find your page use the search.

Fine, so I created it in the wrong space. Now what do I do?

1. Click on the ellipsis on the right side of the edit toolbar (circled in orange).
2. A drop down will appear with Move at the bottom (circled in blue).
3. Click on move and the move dialog will appear.
4. You can use Search, Recently Viewed, or Browse to find the new space.
5. You can also reorder by checking the Reorder check box (in salmon) which will launch an additional dialog when the Move button is pushed.
