Co-Chair approval of HL7 Trusted Users for Jira Specification Feedback Projects

Co-chairs have permissions in Jira to manage specifications in the Jira Specification Feedback Projects. That means that a co-chair can triage submitted items for relevant specifications which is the first step in reviewing and making decisions on an issue.

If a Work Group wishes to request an individual to have "HL7 Trusted User" permission (for example, a member of a project team for a particular specification), the WG Co-Chair must send an email to webmaster@hl7.org requesting a change to the permission and include the following information for each individual:

- Name
- Email address
- Confluence/Jira ID
- Name of Specification Feedback Project - FHIR, CDA, V2, Other
